RE: 09810501

The only submission numbers I can find for porcine reproductive and respiratory syndrome virus (PRRSV) strain VR 2385

**GENBANK U03040** CAS RN: 151609-21-1

I am looking for any sequence that is 10-50 nt in length that would hybridize to this PRRSV strain (see claim 30 please). I'm looking for 2 primers. A text search might also be useful.

There are a ton of synonyms for the name of this virus, but the most common are: mystery swine disease, blue-eared syndrome, swine infertility and respiratory syndrome, porcine epidemic abortion and respiratory syndrome, blue ear disease, blue abortion disease, Wabash syndrome, mystery pig disease and swine plague. It's also known as a Lelystad virus, but I am not interested in anything associated with this name because I am only interested in North American isolates. Hits would comprise any of these names (except for Lelystad) and a primer associated with VR 2385 (or its Genbank or CAS RN nos.)

Thank you David. Shanon

RE: 09810501

Shanon,

I'm working on 066 as we speak. I'm doing the score over length part for question 2. About the accession number search, I was asked by Arti to hold back these searches because some people upstairs are of the belief that some examiners are using this to get around the CRF rules. I should know their conclusion soon and will set it up then. Hope this isn't a big inconvenience.

Subject: 09810501

Hi David. I have 2 quick questions for you. I was wondering if it would be possible to do a fragment search for a sequence I have Genbank accession numbers to. Also, I was wondering if the search for 09/769066 is going to be ready soon (I hate to ask, but I need the count).

Thank you. Shanon Foley
